## Fundamental problems:

- When?
- Why?
- How?
- Components?
- Principles?

**High Energy Physics** addresses these questions by studying the behaviour of the Nature at the smallest possible distances, where its elementary ingredients interact.

- Structure of matter?
- Mass hierarchy?
- Particle interactions?

YOUTUBE.COM/USER/DOMINICWALLIMAN @DOMINICWALLIMAN

# **One Way of Learning: Accelerator Experiments**

# How to Observe (in macro-scale)?

# How to Observe (in macro-scale)?

Basic 'tool': our eyes.

Resolution: 0.03 mm (about 25 cm from eye).

## Resolution

How far from each other are objects before they will visually merge.

# How to Observe (in macro-scale)?

Basic 'tool': our eyes.

Resolution: 0.03 mm (about 25 cm from eye).

## Resolution

How far from each other are objects before they will visually merge.

Microscope:

- visible light – magnification up to 1500x,
- ultraviolet – magnification up to 3500x.

# How to Observe (in macro-scale)?

Basic 'tool': our eyes.

Resolution: 0.03 mm (about 25 cm from eye).

## Resolution

How far from each other are objects before they will visually merge.

Microscope:

- visible light – magnification up to 1500x,
- ultraviolet – magnification up to 3500x.

## Observation Conditions

The wavelength must be shorter than the size of the object.

## Corpuscular-wave Duality

Matter has properties of both: corpuscles and waves. In particular, each particle has a corresponding wavelength, which is in inverse proportion to its energy:

$$\text{wavelength} \sim 1/\text{particle energy}$$

*The higher is the particle energy, the smaller is its wavelength.*

## Corpuscular-wave Duality

Matter has properties of both: corpuscles and waves. In particular, each particle has a corresponding wavelength, which is in inverse proportion to its energy:

$$\text{wavelength} \sim 1/\text{particle energy}$$

*The higher is the particle energy, the smaller is its wavelength.*

### Electron microscope:

- magnification:  $10^7 \times$
- resolution: 50  $\mu\text{m}$

## Corpuscular-wave Duality

FFI.com - Philippe Crozet

## Conseil Européen pour la Recherche Nucléaire European Organization for Nuclear Research

### CERN:

- created: 29 September 1954 (decided in 1952),
- the biggest lab in the world devoted for fundamental research,
- ~2600 employees and ~13000 users (scientists and engineers) from all over the world,
- side 'technologies': www, touch screen, ...

### (Some) scientific equipment:

- accelerators: Proton Synchrotron, Super Proton Synchrotron, Large Hadron Collider,
- LHC detectors<sup>1</sup>: ATLAS, CMS, ALICE, LHCb, TOTEM, LHCf, MoEDAL.

---

<sup>1</sup>At CERN we have about 60 other experiments: e.g. COMPASS, NA61/SHINE, ...

Large Hadron Collider  
(LHC)

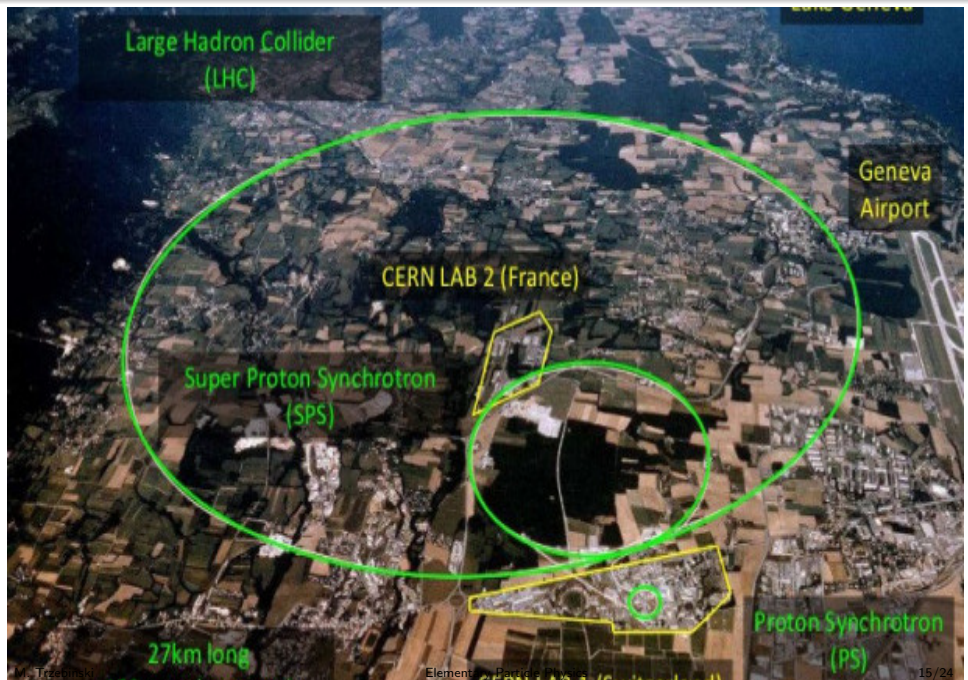

Geneva  
Airport

CERN LAB 2 (France)

Super Proton Synchrotron  
(SPS)

27km long

Proton Synchrotron  
(PS)

- The most powerful accelerator built (so far): 27 km of circumference.
- Started in 2008.
- Superconducting electromagnets: 1232 dipoles and 858 quadrupoles.
- Temperature of magnets: 1.9 K ( $-271.3^{\circ}\text{C}$ ).
- Magnetic field: (up to) 8.33 T.
- Ultra-high vacuum  $10^{-13}$  atm.
- Accelerates protons to 14 TeV or heavy ions to 2.76 GeV/nucl.
- Particles are accelerated to  $0.999999991 \times c$ .
- Discovery of the Higgs boson by ATLAS and CMS experiments  $\rightarrow$  Nobel prize for Francois Englert and Peter Higgs in 2013.

First Stable Beams

proton-proton collisions at 13 TeV

Run: 266904

Event: 9393006

2015-06-03 10:40:31 CEST 24

Usually huge, but very precise equipment:

composed of sub-detectors.

# Particle Detectors (on example of ATLAS@LHC)

how we **describe** the interaction

how we **see** the interaction

how we **describe** the interaction

how we **see** the interaction

We cannot directly see what happened in the **interaction point**

how we **describe** the interaction

how we **see** the interaction

We cannot directly see what happened in the **interaction point**

**BUT**

We cannot directly see what happened in the **interaction point**

**BUT**

by studying behaviour and properties of products we can **make conclusions**.

Lets assume that based on theoretical predictions we would like to **find a Higgs boson decaying into four muons.**

Lets assume that based on theoretical predictions we would like to find a Higgs boson decaying into four muons.

1) From all collisions detected in ATLAS choose only ones containing four muons.

Lets assume that based on theoretical predictions we would like to find a Higgs boson decaying into four muons.

- 1) From all collisions detected in ATLAS choose only ones containing four muons.
- 2) By using tracker, check if these muons point to the same point (vertex).

Lets assume that based on theoretical predictions we would like to find a Higgs boson decaying into four muons.

- 1) From all collisions detected in ATLAS choose only ones containing four muons.
- 2) By using tracker, check if these muons point to the same point (vertex).
- 3) Measure momentum and energy of muons.

**Deadline for  
applications  
30 April 2019**

Partial support for best applicants!

Find us on  **More information and application form at**  
**ppss.ifj.edu.pl**

Advertisement campaign project is financed by the Polish National Agency for Academic Exchange under the Modern Foreign Promotion Programme. 

Usually the first opportunity for students to participate in a real scientific research.

Four weeks: one for classes and three for work on project (theory or experiment).

Lectures and projects in English.

Support for lodging for the best candidates.

Visit our webpage: [ppss.ifj.edu.pl](http://ppss.ifj.edu.pl)

Join us on Facebook:  
<https://www.facebook.com/ifjpanppss>

In future: possibility to be a **PhD student in IFJ PAN Cracow**.

In case of questions send mail to:  
[ppss@ifj.edu.pl](mailto:ppss@ifj.edu.pl)  
or contact me directly.
