1. Introduction

Periphrastic causative constructions (PCCs) employ free verbal forms to mark causative situations and can be subdivided into factitive (= English *make*) and permissive (= English *let*) types (Nedjalkov & Sil’nickij 1969: 28; Nedyalkov & Silnitsky 1973: 10; Kulikov 2001: 886–887, 892). In modern Latvian, factitive PCCs are most frequently based on the verb *likt*, while permissive PCCs typically employ the verb *ļaut*, cf. (1a) and (1b). PCCs based on other predicates are used only marginally, namely with the verbs *spiest* ‘make’ and *dot, laist* ‘let’ (Pakerys 2016: 446–455). The affected participants of the causative situation are termed “causee” and “permittee” respectively and are marked as dative in *likt*- and *ļaut*-constructions:

(1) a. *Smēķēšana liek sašaurināties*  
   smoking:nom.sg make:prs.3 contract:inf.rfl  
   *asinsvadiem*  
   blood.vessels:dat.pl  
   ‘Smoking makes blood vessels contract.’

b. *Ļauj viņai palikt pie manis*  
   let:imp.2sg 3.dat.sg.f stay:inf at 1sg.gen  
   ‘Let her stay with me.’

A preliminary overview of Latvian 16th and 17th century texts revealed that at an earlier stage, PCCs differed from their current use in a few ways. For example, it was not uncommon to use *likt* in some permissive contexts. Additionally, the PCCs with *laist* occurred more frequently, while those with *ļaut* were rare. This paper aims to describe Latvian PCCs based on a collection

---

1 This paper is one of the outcomes of the research project “Periphrastic causatives in Baltic” financed by the Research Council of Lithuania, agreement No. LIP-080/2016. I would like to sincerely thank the anonymous reviewer and Pēteris Vanags for a number of very important remarks and suggestions which helped me improve the present version of the article. Many thanks to Cristina Aggazzotti for editing the English of my article.
of 16th c. texts. (Seventeenth century data will be presented in a separate later study.) The data analyzed in this study are collected from an electronic database of early Latvian texts\(^2\) and include the main Latvian printings of the 16th century:

1. *Catechismus Catholicorum* […], Vilnius: Lancicius, 1585 (= CC1585)
2. *Enchiridion* […], Königsberg: Osterberger, 1586 (= Ench1586)
4. *Vndeutsche Psalmen* […], Königsberg: Osterberger, 1587 (= UP1587)

I reviewed non-lemmatized indices of these texts with the aim of finding all forms of *likt*, *laist*, *spiest*, *dot* and *laut* used in PCCs. The orthography of 16th c. Latvian varies considerably, but I hope to have collected the majority of forms, although some omissions are, of course, possible. The analysis presented below is organized according to the verbs used in the PCCs: *likt* (Section 2), *laist* (Section 3), *dot* (Section 4) and *spiest* (Section 5). I also searched for PCCs with *laut*, but found no examples. The main findings are summarized in the final section (Section 6).

### 2. Permissive and factitive *likt*

PCCs with *likt* are typically used as factitive ‘make’ in modern Latvian, and thus far, I have not found a good (non-ambiguous) modern example of a permissive construction with *likt*. The permissive function of *likt* in the 16th c. texts can be exemplified by (2a):

\[
\text{(2) a. Latvian} \\
\text{Touwe würde nhe lecke} \\
\text{poss.2sg.acc.m word:acc.sg neg let:prs.3} \\
\text{te te [f]cham[=tefcham\(^3\)] buut} \\
\text{really be:inf} \\
\text{(lit.) ‘They do not really let your word to be [here].’} \\
\text{UP1587 LB\text{\_}26-27}
\]

b. Low German\(^4\)

\[
\text{Dyn wort men leth nicht bebben [= hebben] war} \\
\text{Vanags 2000: 216}
\]

\(^2\) Available online at http://www.korpuss.lv/senie/. The symbol <§> used in this corpus was replaced by <f>.

\(^3\) Vanags 2000: 216.

\(^4\) Here and further, exact or textually close sources of Latvian translations will be given to show corresponding PCCs in High and Low German.
Out of 43 examples of PCCs with likt, twelve (27.9%) are permissive, as exemplified in (2a), while the remaining 31 (72%) are factitive. I also reviewed another use of likt, as ‘put, set, lay, leave’, and found 37 examples (46.25%) out of total of 80 forms of likt found in the corpus; this means that in more than half of the cases, likt was used in a PCC (see Table 1 at the end of this section). Distinguishing factitive function from permissive function is not straightforward in some contexts; I used the conservative approach of marking the construction as permissive only if it could not be interpreted as factitive. The majority of these permissive PCCs had negation, with the exception of one case presented in (3a). A clearly factitive use of likt is shown in (4a).

(3) a. Latvian

\[
\begin{array}{cccc}
\text{es} & \text{efme} & \text{Greeke} & \text{litczis} \\
1\text{SG.NOM} & \text{be:PRS.1SG} & \text{sin:ACC.SG} & \text{let:PST.ACT.PTCP.NOM.SG.M} \\
\end{array}
\]

notickt

happen:INF

(lit.) ‘I have [...] let the sin happen.’

Ench1586 F2B19–20

b. German

\[
\begin{array}{cccc}
\text{hab} & \text{[ich]} & \text{ſchaden} & \text{laffen geschehen} \\
\text{WA} & \text{30.1} & \text{385} \\
\end{array}
\]

\text{Mege} & \text{kriſt} & \text{vs} & \text{Czilwheke} \\
\text{sleep:ACC.SG} & \text{fall:INF} & \text{on DEM.ACC.SG.M} & \text{man:ACC.SG} \\
\end{array}
\]

‘Then God caused a deep sleep fall onto the man’ (Genesis 2:21)

Ench1586 HB16–17

b. High German

\[
\begin{array}{cccc}
\text{Da} & \text{ließ} & \text{Gott} & \text{einen tieffen Schlaff fallen} \\
\text{III} & \text{100} & \text{10–11} \\
\end{array}
\]

PCCs with verbs of cognition and perception (‘let’ + ‘know’, ‘recognize’, ‘see’, etc.) may resemble permissive PCCs, but they are best analyzed as factitive.
(von Waldenfels 2012: 104). There were 8 cases of cognitive causation out of 31 factitive PCCs, cf. (5a):

(5) a. Latvian

\[

\end{array}
\]

\text{to Speetczibe unde to atnäckfchenne} [...] \\
‘we let you know the power and the coming [...]’

EvEp1587 2074-5 2 Peter 1,16

b. German

\text{wir euch kundgetan haben die Kraft und Zukunft}

LB1545 2 Peter 1:16

The marking of causee and permittee in \textit{likt}-constructions formally seems to fluctuate between dative and accusative (see Table 1 at the end of this section), but the majority of datives are in pronominal form, which can also be accusative. The forms showing this ambiguity are 1SG, 2SG, 1PL, 2PL, and RFL pronouns, cf. (5a) where \textit{yums} is etymologically dative, but can be also used as accusative, as in (6a):

(6) a. Latvian

\[
\begin{array}{l}
\text{NHe thurretes} & \text{yums} & \text{paśchems} & \text{pär Guddres}.
\end{array}
\]

\text{neg hold:IMP.2PL.RFL 2PL.DAT/ACC self:DAT.PL for wise.ACC.PL.M}

EvEp1587 3614 Romans 12:17

‘Do not estimate yourself to be wise’

b. German

\text{Haltet euch nicht selbst für klug.}

LB1545 Romans 12:17

This type of case use is known not only in early Latvian texts where it can be interpreted as reflecting influence of Low German where homonymous pronominal forms are used (Vanags 1998: 43–44); this phenomenon is also noted in some dialects (see Endzelīns 1951: 510, 516). The only non-pronominal dative form is found in UP1587 L4₈: 1emst greekems ‘these sins’ (DAT.PL).

An interesting example is (7a), where \textit{likt} is used in a reflexive construction⁶ and the actual permittee is introduced by a PP with no ‘from’:

---

⁶ Note that this type of reflexive construction is a copy of the German model to mark reflexivity (cf. Vanags 1993, 167); the expected original Latvian form would be \textit{βōw} for all persons.
(7) a. Latvian

\[nhe \text{ ledtcz} \quad \text{thöw} \quad nhe \; no \; \text{wene} \quad \text{faymoth}\]

\text{NEG 2sg.dat/acc 2sg.dat/acc 3sg.acc despise:inf}

EvEp1587 13\textsubscript{8} Titus 2:15

‘Do not let yourself to be despised by anyone.’

b. High German

\text{Laß dich niemand verachten}

LB 1545 Titus 2:15

c. Low German

\text{Lath dy nemande vorachten}

LB 1599 [1545] Titus 2:15

As we see in (7b-c), the corresponding passage in Luther’s Bible translation does not have a PP: either the translator used a different source or the Latvian PCC with PP \textit{no} was already established to some extent in early written Latvian. An exact German correspondence can be seen in (8b):

(8) a. Latvian

\[\ldots\; kha \quad \text{thas} \quad \betaöw \quad \text{no} \quad \text{to}\]

\text{that 3sg.nom.acc.m refl.dat/acc 3sg.acc from 3sg.acc.nom.m}

\text{kruftyt} \quad \text{lyckte}

\text{baptize:inf make:irr.3}

EvEp1587 22\textsubscript{24}22\textsubscript{4} Matthew 3:13

‘[...] that he would be (lit. have himself) baptized by him.’

b. High German

\[\ldots\; \text{daß er sich von ihm taufen ließe}\]

LB 1545 Matthew 3:13

c. Low German

\[\ldots\; \text{dat he van em dorpen lethe}\]

PP-marking in similar PCCs is also known in Slavic languages (see von Waldenfels 2012: 134, 138–140, 187, 196, 260, 271) on PPs with Polish \textit{przez} (also \textit{od} in earlier texts) and Czech \textit{od} (also \textit{podle, skrze} in earlier texts). Latvian agent PPs with \textit{no} ‘from’ were also used in passive constructions until the 19\textsuperscript{th} c. following the German pattern of PPs with \textit{von} (Holvoet 2016: 27); the same PPs with \textit{no} in PCCs seem to reflect another instance of copying of the German model. In the case of morphological reflexives, syntactic
restructuring may also have taken place and facilitated borrowing (Holvoet 2016: 23–28), but it seems that the German parallel of the type illustrated in (8) probably played a crucial role.

Reflexive constructions of *likt* are also interesting in that they show a doubling of the reflexive marker; in general this is a well-known phenomenon in early Latvian texts (see Vanags 1993: 169). For example, the reflexive marker may occur just once as a morphologically independent form *böw*, as in (9a), or it can be doubled, as in (9c) and (9e), where *böw* is used and the reflexive morpheme `-s` is attached to the predicate of the INF-clause. It is interesting to note that the lines of (9a) and (9c) are close to each other yet differ in the presence/absence of `-s`. (The translator was not sure about the form of the reflexive construction at the same passage.)

(9) a. Latvian

```
us to ka tās böw
on DEM.ACC.SG.M that DEM.NOM.SG.M RFL.DAT/ACC
mheflote lickte
tax:INF tax:INF
EvEp1587 14₈ Luke 2:5
```

‘that he would be taxed (lit. have himself taxed).’

b. German

```
auf daß er sich schätzen ließe
LB 1545 Luke 2:5
```

c. Latvian

```
ka the böw mheflote-s lickte
that DEM.NOM.PL.M RFL.DAT/ACC tax:INF-RFL make:IRR.3
EvEp1587 14₂,₃ Luke 2:3
```

‘so that they would be taxed.’

d. German

```
daß er sich schätzen ließe
LB 1545 Luke 2:3
```

e. Latvian

```
Dews nhe leke böw apmhedite-s
god: NOM.SG NEG make:PRS.3 RFL.DAT/ACC mock:INF-RFL
EvEp1587 176₃,₄ Galatians 6:7
```

f. German

```
Gott läßt sich nicht spotten!
LB 1545 Galatians 6:7
```
Another technique to render the German reflexive construction *sich lassen* is to use the morphological reflexive *liktie-s*, but it should be noted that the syntactically independent reflexive *ßöw* is retained in all 3 attested cases of this type. An example of one such case is in (10a):

(10) a. Latvian

\[ Ka\{s\} \text{titcz und } \betaöw \text{ chruftyt leka-s} \]

who believe:prs.3 and rfl:dat/acc baptize:inf make:prs.3-rfl

UP1587 K3A\text{17-18}

‘who believes and has him-/her-self baptized.’

b. German

\[ \text{Wer glaubt und sich taufen lässt} \]

LB 1545 Mark 16:16\text{7}

German *sich lassen* (as a causative construction) can thus be rendered in Latvian in three ways:

a) a syntactically independent reflexive marker *sev* is used (1 example)\text{8}

b) same as (a), but the morphological reflexive marker *-s* is also added to *likt*, which is the predicate of the matrix clause (6 examples), or

c) same as (a), but the morphological reflexive marker *-s* is also added to the transitive predicate of the subordinate infinitive clause (two examples).

In (b) and (c) we see that the locus of affixation of the reflexive marker fluctuates, but there is some preference to adjoin it to the matrix verb. As Holvoet (2016: 17) explains, the “reflexive marker is associated with the matrix clause verb in virtue of being controlled by its subject and with the embedded infinitive in virtue of being assigned a semantic role by it”. There is also a third option when both the matrix verb and the embedded infinitive are affixed, but it was not attested in the analyzed texts (see Holvoet 2016: 17-18, 21-22 on Latvian constructions with reflexive *lautie-s* and *liktie-s*).

---

\text{7} This line is absent in the source presented in Vanags (2000:62) so I have selected a corresponding passage from the Bible translation.

\text{8} I counted only 3rd person reflexives, because 1st and 2nd person pronouns, which are used according to the German pattern (that is, *mich, dich*, etc.), never occur in constructions of the type (b) and (c).
3. Permissive, hortative and optative *laist*

PCCs with *laist* are only marginally used in modern Latvian compared to those with *ļaut* (Pakerys 2016: 453, 455), but in 16th c. texts the situation is quite different: *laist* is well-attested and *ļaut* was not found in any of the texts surveyed for this study. I will start by discussing the basic permissive function of *laist* and then turn to its use in hortative and optative constructions. A typical permissive use is seen in (11a):

(11) a. Latvian

\[
\begin{array}{llllll}
\text{Laydeth} & \text{tös} & \text{Bherninges} & \text{py} \\
\text{let:IMP.2PL} & \text{DEM.ACC.PL.M} & \text{child:DIMIN.ACC.PL} & \text{to} \\
\text{man} & \text{näckt} \\
1\text{SG.DAT/ACC} & \text{come:INF} \\
\end{array}
\]

*Ench1586 I_{13–14} (Mark 10:14)*

‘Let the little children come to me.’

---

9 Including one case of genitive of negation.
b. German

Laßt die kindlin zu myr komen

WA 12 45

In two cases PCCs with *laist* were used with predicates of cognition, which can be interpreted as factitive, cf. above on *likt*, for example (note that the construction is passive):

(12) a. Latvian

Juuje Laipnybe laideth

ßinnamme buuth wueffims czilwhekims

EvEp1587 1022–23 Philippians 4:5

‘Let your kindness be known to all people.’

b. German

Eure Lindigkeit lasset kund sein allen Menschen.

LB 1545 Philippians 4:5

Similarly to PCCs with *likt*, many permittees formally seem to be marked as dative, but the vast majority of them are expressed by pronominal forms (see Table 2 at the end of this section), which can also be used as accusative, except for one case of the noun in non-ambiguous dative in (13a):

(13) a. Latvian

Layd Atczems yempt ßouwe Mege

Vanags 2000: 64

In one reflexive construction, the actual permittee is coded by PP with *no*, cf. the discussion of this type in Section 2 above. Two High and Low German editions of the Luther’s Bible translation were checked but they do not have PPs in this passage, as shown in (14b) and (14c). As mentioned previously, either other sources were used for the translation or the construction was used by the translator independently from the source.
Latvian also has a 3rd person hortative/optative construction\(^\text{10}\), which consists of the modal periphrastic marker *lai* and the present indicative\(^\text{11}\). The marker *lai* is a shortened form of *laid*, the 2nd person imperative of the permissive verb *laist* (see Endzelīns 1951: 893 with further references). This type of modal construction is attested in UP1587 and corresponds to the German subjunctive, as shown in (15a) and (15b) (cf. also *Layde gir* UP1587 H2\(_{17}\) = Low German *sy*, see Vanags 1993: 173). In (15c), Latvian *laid* + prs.3 corresponds to the German permissive construction, but the translation slightly differs.

\[\text{(15) a. Latvian} \]
\[
\text{Layd} \quad \text{nake} \quad \text{touwe} \quad \text{walftye} \\
\text{PTCL} \quad \text{come:PRS.3} \quad \text{poss.2SG.NOM.F} \quad \text{kingdom:NOM.SG} \\
\]
\[

\]
\`
May your kingdom come.'
\`

\[\text{b. Low German} \]
\[
\text{Idt kame} \quad \text{dyn rick} \\
\]
\[
\text{Vanags 2000: 166} \\
\]

\(^{10}\text{Following van der Auwera et al. 2013, I understand hortative (here, in 3rd person) as a construction that expresses the wish of the speaker and appeals to the addressee for the help to fulfill that wish; in contrast, the optative merely expresses the wish, but does not appeal to the addressee, cf. English 3rd person singular hortative *let him sing* vs. optative *may he live long*. In practice, however, it is not always easy to make a strict judgment on whether an appeal to the addressee is made.}\)

\(^{11}\text{The past indicative is attested in folk songs (Endzelīns 1951: 893) and the future indicative can also be used in some cases (Holvoet 2007: 42, fn. 12).}\)
c. Latvian

\textit{Laid tems noteke ko the doma}

\textit{happen:PRS.3 what DEM.NOM.PL.M think:PRS.3}

\texttt{UP1587 LB5-6}

‘Let their thoughts [lit. what they think] happen to them.’

d. Low German

\textit{Lath fe drepen ere böše fake}

Vanags 2000: 236

In total there are three instances of optative/hortative \textit{laid + PRS.3}; the rest are functionally hortative/optative, but are used with the infinitive.

For example, in (16) the German subjunctive was first translated as the present indicative (Latvian \textit{nake} for Low German \textit{kame}), but then the form \textit{laid + INF} was used to translate Low German \textit{bliuen} (also subjunctive):

(16) a. Latvian

\texttt{Thaes beelestibes Walstibe nake}

\texttt{DEM GEN SG.F mercy:GEN SG kingdom:NOM SG come:PRS.3}

\texttt{mums kläth vnd laid exkan mums pallickt}

\texttt{1PL DAT/ACC near and PTCL inside 1PL DAT/ACC stay:INF}

\texttt{UP1587 K4B6}

‘May the kingdom of mercy come to us and may stay within us.’

b. Low German

\texttt{Dat rike der gnaden kame uns tho / vnde do in uns bliuen}

Vanags 2000: 225

In (17) the German subjunctive form \textit{sei} was translated into a full Latvian permissive construction with the permittee in the accusative, which corresponds to the German nominative; cf. also CC1585 62; where a shorter form \textit{leij} is used with the accusative. This use might illustrate the starting point of the development of optatives/hortatives with \textit{laid} (cf. Holvoet 2001: 63): the construction is formally permissive, but it can fulfill the function of the 3\textsuperscript{rd} person hortative\textsuperscript{12}:

\textsuperscript{12} Note that there are more German forms of the subjunctive in the passage in EvEp1587 33–34, but a PCC with \textit{laist} was used only once.
A further step towards the later version of the hortative/optative could be
as follows. First, the permittee originally coded by the accusative (or dative)
would acquire nominative case (cf. Holvoet 2001: 63) to mark its prominence as
a new subject of the construction. (Note that imperative constructions typically
lack overtly expressed subjects so former permittees can assume the role of
subject.) A similar change in case marking from direct object (accusative)
to subject (nominative) is attested in the Russian modal *pust’*-constructions
(Dobrušina 2016); cf. also the introduction of the nominative instead of
the oblique case in Dutch *laten*-hortative, see Holvoet (2001: 63, fn. 1). At this
point the infinitive may have still been retained; however, since it conflicts
with the nominative subject, the infinitive may have then been replaced by
the present indicative. The frequency of the use of *laist* in imperative forms
might also have played a role in the formation of the optative/hortative with
*laid*. For example, in UP1587, out of 32 permissive uses of *laist*, one third (11)
were imperative 2nd person singular and plural forms.
The final construction is the 1st person plural hortative, which is most likely a copy of the German \textit{lass(e)t uns + inf} construction (cf. Vanags 1993: 174; Holvoet 2007: 42: authentic or influenced by German; see Pakerys 2017 on this construction in Old Prussian). In most cases, the 2nd person plural form \textit{laidiet}, corresponding to the German \textit{laß(e)t} as in (18a), is used, but in some cases the 2nd person singular form \textit{laid(i)}, corresponding to the German 2nd person singular imperative \textit{lass(e)} as in (18d), occurs:

4. Permissive \textit{dot}

The verb \textit{dot} ‘give’ is only marginally used as the permissive ‘let, allow’ in modern Latvian (Pakerys 2016: 454). In the studied corpus of 16\textsuperscript{th} c. texts, perhaps only one case of a PCC with Latvian \textit{dot} can be interpreted as permissive. However, this construction does not seem to be independent from the source of the translation. When compared with one of the versions of the catechism of Petrus Canisius, it is clear that the passage in question renders the German construction \textit{sich zu erkennen geben}, cf. (19):

(19) a. Latvian

\begin{tabular}{lllll}
Ka & \textit{doed} & ceuw & tha & milib \textit{pafifth} \\
how & give:PRS.3 & RFL.DAT/ACC & DEM.NOM.SIG.F & love & recognize:PRS.3\textsuperscript{14} \\
CC1585 14\textsubscript{4,5}
\end{tabular}

(lit.) ‘How does love give itself to be recognized.’
(= ‘How can one recognize love.’)

\textsuperscript{14} Here, the 3\textsuperscript{rd} person present tense form \textit{pazīst} is used instead of the expected infinitive, \textit{pazīt}.
b. German  

\textit{Wie gibt sich die rechte Liebe zuerkennen?}^{15}

In other cases, the use of \textit{dot} can only to some extent be interpreted as permissive. These constructions are also closely tied to the sources and are of the type \textit{God give} (IMP) + \textit{that}-clause. In the sources of the texts of UP1587 (see Vanags 2000: 305 ff.), this construction in all cases (8 times) corresponds to Low German constructions with \textit{gēven} or \textit{vörlēhenen}: \textit{Godt giff/vorlene uns dat} [...] (lit.) ‘God give, provide us that’, cf. (20). In these constructions, the interpretation may fluctuate between metaphorical transfer (giving, providing) of the event and allowing, permitting it.

(20) a. Latvian

\begin{verbatim}
dode                             mums /    ka   mhes    touwe  
give:IMP.2SG  1PL.DAT/ACC that  1PL.NOM  POSS.2SG.ACC.M  
myle  Dhele  adßifam    vnde  
beloved:ACC.G.M  son:ACC.G  recognize:PRS.1PL  and  
teitczam  praise:PRS.1PL  
\end{verbatim}

(lit.) ‘Give us so that we recognize and praise your beloved Son.’  
(= ‘Let us recognize and praise your beloved Son.’)

b. German

\begin{verbatim}
giff  uns  dat  wy  dinen  leuen  Sön  erkennen  vnde  pryfen  
\end{verbatim}

Vanags 2000: 306

This construction with a \textit{that}-clause is also attested once in CC1585 and may correspond to the above-mentioned German constructions, but I could not locate the source of this passage:

\footnote{Petrus Canisius, \textit{Catholischer Catechismus} [...], Köln: Maternus Cholinus, 1569, [97] (available online at: http://digital.staatsbibliothek-berlin.de/werkansicht?PPN=PPN816510229&PHYSID=PHYS_0005). The text on the given page in general differs from CC1585 14, but the question cited corresponds exactly to the Latvian passage and only the adjective \textit{rechte} has no correspondence. See also Michelini (2001: 128, fn. 43) who compares this question with \textit{Wie erzeigt sich unnd wird erkannt die wahre Christliche Liebe gegen dem Nechsten?} from the edition of the catechism of Canisius of 1584.}
(21) a. Latvian

\[
\begin{array}{llllll}
\text{Dews} & \text{dode} & \text{ka} & \text{Christo} & \text{tam} \\
\text{god:\,NOM.\,SG} & \text{give:\,IMP.\,2SG} & \text{that} & \text{Christ:\,DAT.\,SG} & \text{DEM.\,DAT.\,SG.\,M} \\
\text{Kungam} & \text{cour} & \text{tho} / & \text{doudfe} & \\
\text{lord:\,DAT.\,SG} & \text{through} & \text{DEM.\,ACC.\,SG.\,M} & \text{many:\,?} \\
\text{cruʃitites} & \text{dweʃceles} & \text{atweʃte} & \\
\text{baptize:\,PST.\,PSS.\,PTCP.\,ACC.\,PL.\,F} & \text{soul:\,ACC.\,PL} & \text{bring:\,PST.\,PSS.\,PTCP.\,?} & \\
\text{war} & \text{tapt} & & & \\
\text{be.\,able:\,PRS.\,3} & \text{become:\,INF} & \\
\end{array}
\]

lit. ‘God give, so that many baptized souls can be brought to the Lord Christ through this.’

Other constructions containing dot complemented by an infinitive include the following, which also closely follow the sources and replicate the use of German geben (Low German geven): kha tims tas Gars doeuwe Jtreʃeet (EvEp1587 156[12-13]) = nachdem der Geist ihnen gab auszusprechen (LB 1545 Acts of the Apostles 2:4), darna alfe en de Geiʃt gaff vththofprekende (LB 1599 [1545] Acts of the Apostles 2:4) ‘as the Spirit gave them (ability) to speak’, Jums gir dota / ūnnað (EvEp1587 50a) = Euch ist’s gegeben, zu wissen (LB 1545 Luke 8:10) = Yuw yʃtet gegeven tho wetende (LB 1599 [1545] Luke 8:10) ‘you are given to know’. This use is related to the permissive realm only to the extent that it can be interpreted as enablement.

5. Factitive spiest

In modern Latvian, spiest is only rarely used to express causation (Pakerys 2016: 448-449) and in 16th c. texts at least two clear cases of this use are attested: in (22a) spiest is complemented by INF-clause, and in (22d) a that-clause is adjoined. In both cases, the syntactic structure directly corresponds to the German constructions with (High German) nötigen and (Low German) dwengen (= High German zwingen) which equals Latvian spiest:

(22) a. Latvian

\[
\begin{array}{llllllll}
\text{vnde} & \text{ʃpede} & \text{thos} & \text{ʃcheit} & \text{exkan} & \text{näckt} \\
\text{and} & \text{compel:\,IMP.\,2SG} & \text{DEM.\,ACC.\,PL.\,M} & \text{here} & \text{inside} & \text{come:\,INF} \\
\end{array}
\]

EvEp1587 143,14-144,1 Luke 14:23

‘[...] and compel them to come here (inside).’

16 Question marks refer to ambiguous inflection -e.
b. High German

und nötige sie hereinzukommen

LB 1545 Luke 14:23

c. Low German

unde nodige fe herin tho kamende

d. Latvian

\begin{tabular}{llll}
\textit{to} & \textit{fpede} & \textit{the /} & \textit{ka} \textit{tham} \\
DEM.ACC.SG.M & compel.PST.3 & DEM.NOM.PL.M & that DEM.DAT.SG.M \\
\end{tabular}

winge & kruſte & neſt & bye \\
3.GEN.SG.M & cross:ACC.SG & carry:INF & be:PST.3 \\
EvEp1587 93,12-13

‘[...] they compelled him, so that he had to carry his cross.’

e. Low German

den dwu‘ngen fe dat he emm syn Cru‘tze dregen moſte

Passio 1546 [52]

A similar construction to (22d) is attested also in UP1587 Ev11-12 (\textit{fpeduſſe gir / Ka} [...] = \textit{dwungen hat /dat} [...] ; Vanags 2000: 83). The causee in spiest-constructions is marked by the accusative; in UP1587 Ev11 the pronominal form \textit{thöw:2.sg} is used, which formally could be dative, but these forms also serve as accusatives, as mentioned previously. In one case, the \textsc{inf}-clause is possible, but omitted, see Ench1586 CA3.

6. Conclusions

Latvian periphrastic causative constructions in 16\textsuperscript{th} c. texts differ from their modern use in three main respects: (1) \textit{likt} is used in permissive contexts (notably with negation), (2) \textit{laisi} is a default permissive predicate, and (3) \textit{laut} is unattested. The use of \textit{dot} ‘let’ and \textit{spiest} ‘make’ is marginal, which parallels the current situation in Latvian. Both \textit{dot} ‘let’ and \textit{spiest} ‘make’ seem to be rather closely tied to the (possible) sources of the translations.

As for causee/permittee marking, there is a fluctuation between dative and accusative, but it should be noted that although the majority of pronominals can be formally classified as datives, they are also used as accusatives. In some cases of reflexive constructions, actual causees/permittees were marked by PPs with \textit{no}, which seems to reflect the German pattern of PPs with \textit{von}. However, only some of these examples had corresponding German constructions, meaning that either other sources were used, or the translator was already accustomed to this construction.
The locus of affixation of the morphological reflexive marker in constructions with *likt* fluctuates, but the preferred place seems to be the matrix verb. Related to the permissive use of *laist* are the 1st person plural hortative and 3rd person optative/hortative constructions. The 1st person plural hortative is most likely a direct copy of the German *lass(e)st uns* construction, while the 3rd person constructions seem to be at least a partly independent development of Latvian. Rare 3rd person hortatives/optatives with infinitives, instead of with indicatives, may show an intermediate stage of development (cf. Holvoet 2001: 63): the original permittee was already marked by the nominative, but the infinitive was still kept and then subsequently replaced by the present indicative. Constructions with *laid* + present indicative (= modern use) are attested in only one source (UP1587).

KOPSAVILKUMS

Perifrastiskās kauzatīvās konstrukcijas 16. gs. latviešu valodā

Jurgis PAKERYS

Balstoties 16. gs. latviešu tekstu materiālā, rakstā aplūkoti perifrastiskie kauzatīvi ar darbības vārdiem likt, spiest, laist un dot. Noteikts, ka galvenās atšķirības, salīdzinot ar mūsdienu latviešu valodu, ir šādas: 1) konstrukcijas ar likt lietotas ne tikai faktītīvā, bet arī permisīvā nozīmē (ipaši ar noliegumu); 2) darbības vārds laist uzskatāms par galveno permisīvo predikātu; 3) permisīvās konstrukcijas ar laut avotos nav fiksētas. Darbības vārdi dot un spiest, līdzīgi kā mūsdienu valodā, kauzatīvajās konstrukcijās lietoti reti, šo darbības vārdu lietojums, šķiet, spēcīgi saistīts ar tulkojumu origināliem.

Kauzatīvās konstrukcijas objekts (angl. causee) var būt apzīmēts ar datīvu un akuzatīvu, bet jāpievērš uzmanība, ka vairumu datīva lietojumu veido vietniekvārdu formas (man, tev, mums, jums), kas lietotas gan datīva, gan akuzatīva nozīmē. Reizēm refleksīvo konstrukciju objekts var būt apzīmēts ar prievārdisku konstrukciju ar no. Refleksīvajās konstrukcijās morfoloģiskā refleksivitātes vieta variē, bet liekas, ka biežāk tā pievienota darbības vārdu konjugējamai formai, nevis nenoteiksmei.
